TestFlight Build 19 - Device Acceptance Checklist

Purpose: confirm this TestFlight candidate is safe and ready for App Store screenshots and submission. Test on a real iPhone; record any issue before continuing.

Tester		Device	
iOS version		Date / time	
Network	Wi-Fi / Cellular	Build	1.0 (19)

How to use this checklist

Work top to bottom. Mark each item only after you have performed it. A crash, broken login, missing private media, failed upload, failed notification, or unsafe disclosure is a release hold.

Issue capture

For every defect, capture a screenshot or screen recording and note: route, device, network, exact steps, expected result, actual result, and whether it reproduces after relaunch.

Gate 1 - Native shell and account access

Complete these first. Do not spend time testing deeper flows if this gate fails.

- [] Installed Build 19 from TestFlight and launched from the Home Screen.
- [] Purple warm-glow icon and sand splash look correct; no stretch, flash, or blank screen.
- [] Sign in succeeds; sign out and back in shows only the current account's content.

1. Native shell and navigation

Confirm the iOS wrapper feels stable before testing content.

Check	Pass criteria	Result / notes
[] Cold launch and relaunch	Launch from the Home Screen, then relaunch from the app switcher. No crash, blank screen, or long stuck loader.	
[] Icon and splash	Purple fingerprint-heart-bird icon is crisp; warm sand splash displays without a visual glitch.	
[] Safe areas	On a notched iPhone, no controls or text sit under the notch, Dynamic Island, or home indicator.	
[] Core navigation	Visit Home, Memories, Timeline, Reminders, Library/Activities, and Settings. Back navigation and scrolling work.	
[] Menus and Nest	Open More drawer, profile menu, and Nest. Close each normally; no frozen overlay, clipped sheet, or trapped scroll.	
[] Shared-device sign-out	After signing out and back in, no previous user's memories or profile details flash on screen.	

2. Memories and private media

Use disposable test content. Confirm core creation and private-media delivery on the device.

Check	Pass criteria	Result / notes
[] Text memory	Create a text-only memory. It appears in the feed and opens with the saved content.	
[] Photo memory	Create a memory with one or more photos. Upload completes; thumbnail, detail view, and full-screen viewing all work.	
[] Edit and delete	Edit a test memory and delete it. The feed updates correctly; no stale duplicate or misleading empty state.	
[] Network sanity	If practical, view an existing private image once on Wi-Fi and once on cellular. Images load without exposing an error.	

3. Voice memory and Remy

These checks cover the newly declared microphone use and key interactive surfaces.

Check	Pass criteria	Result / notes
[] Microphone permission	Start a voice memory. Permission wording is clear and relevant; deny/retry behavior is calm if tested.	
[] Record and save	Record a short clip, stop, listen back, and save it as a memory. No stuck recording indicator remains.	
[] Playback	Open the saved memory and play the clip through the standard audio control. No autoplay or silent failure.	
[] Discard and re-record	Discard once or re-record once. Microphone releases and the form remains usable.	
[] Ask Remy	Open Ask Remy and send one harmless test prompt. Composer is unobstructed and a response renders.	
[] Nest interaction	Idle Nest opens to Remy and the six-action violet sheet. It fits the screen and closes normally.	

4. Reminders and notifications

Test both device-local reminders and the OneSignal delivery path.

Check	Pass criteria	Result / notes
[] Local reminder - locked	Create a reminder due in a few minutes, lock the phone, and confirm the notification arrives.	
[] Local reminder - foreground	With the app open, confirm the near-term reminder presents visibly/audibly.	
[] Recurring completion	Mark one recurring reminder 'Done for today'. It advances once only; it does not create duplicates or skip an extra occurrence.	
[] OneSignal test push	Send a test push from the OneSignal dashboard. It arrives; tapping it opens the app normally.	

5. Final journey and release decision

Complete only after every prior gate has passed.

Check	Pass criteria	Result / notes
☐ Activities	Open one Activity, perform a simple action if applicable, then return. No blank screen or broken route.	
☐ Care workspace	If available for this account, switch to a care profile. Data remains correctly isolated from My Nest.	
☐ Failure scan	No crash, blocked login, broken upload, missing media, notification failure, or major visual regression observed.	
☐ Evidence	Screenshots or recordings exist for every issue, with route and reproduction notes.	
☐ Submission readiness	All critical checks pass. This build is suitable for App Store screenshots and the submission package.	

Issue log

Issue / steps to reproduce	Expected vs actual	Evidence / severity

Release decision	☐ Pass - ready for App Store screenshots and submission ☐ Hold - issue(s) logged below
Critical issue found?	☐ No ☐ Yes - do not proceed; include a screenshot and reproduction steps
Tester sign-off
